

Package Index & Reading Guide

Odoo Enterprise Architecture Pitch — MDR Devices Medizintechnik GmbH

Case	Compliant Processes for MedTech
Client	MDR Devices Medizintechnik GmbH
Format	30-min pitch · documents sent day prior
Version	v2 — five rounds of work: initial build, self-correction, cross-reference audit, implementation pass, and an independent Round 5 verification audit with all findings implemented (see Change Log).

WHAT SHIPS TO THE CLIENT — SEND THESE TWO, NOTHING ELSE

1. 01_Executive_Pre_Read/01_Strategic_Memorandum_MDR_Devices.pdf — the board pre-read. 2. 03_Executive_Pitch_Presentation/00_much_consulting_pitch_deck.pptx — the 12-slide deck. Optionally, the Value Stream specification as a technical appendix if a document set feels thin. Everything else in this package is preparation material: a real client never receives your rebuttal playbook, self-scored simulations, or rehearsal card — and sending the full folder to the panel breaks the case fiction and reads as volume, not judgment. Offer the audit trail verbally when the “how do you use AI” question comes.

If you only read three things before the pitch

- 1. Rehearsal Cue Card — 07_Simulation_Readiness_Report/04_Rehearsal_Cue_Card.pdf — the one page meant for drilling out loud (v2: four new beats flagged for hardest drilling)
- 2. Strategic Memorandum — 01_Executive_Pre_Read/... — what actually gets sent to the client
- 3. Boardroom Defense Scenarios — 05_Interview_Rebuttal_Playbook/... — now 20 objections with full model answers

Package map

FOLDER	CONTENTS · STATUS IN V2
00_START_HERE/	This index · Round 5 Change Log — the authoritative record of what the independent audit found and where every fix landed
01_Executive_Pre_Read/	Strategic memorandum v2 — client-facing
02_Technical_Architecture_Blueprint/	Core Object Schema v2 · Value Stream specification v2 — the reasoning behind the deck
03_Executive_Pitch_Presentation/	The actual deck (.pptx) v2 — SLIDES 5 & 9 CORRECTED · slide blueprint v2 · verbatim script v2
04_Regulatory_Compliance_Governance/	GxP Validation Master Plan v2 — GAMP split, e-sig gate, regression suite (now TC-19), cutover, LIMS end-state, Odoo.sh, GDPR scope
05_Interview_Rebuttal_Playbook/	20 objections with model answers v2 — EXPANDED FROM 12
06_Audit_and_QA/ · 07_Simulation_Readiness_Report/	Rounds 1–4 audit trail — retained verbatim, deliberately unmodified; superseded statements are governed by the Round 5 Change Log. Cue card v2 .

- **Verify the flagged claims in a live Odoo sandbox** — consignment valuation reporting and consumption-triggered invoicing are flagged everywhere they occur, never asserted as tested. Build the credential block and quarantine flow in a trial instance and screenshot the real UI into Slides 6–8 — it is the single highest-ROI hour left, and it converts the package's biggest admitted weakness into its closing line.
- **Rehearse out loud** — the cue card makes that easier; it does not replace doing it.
