

12-Slide Executive Pitch

MDR Devices Medizintechnik GmbH — slide-by-slide layout, visual, and on-slide copy

#	SLIDE	LAYOUT & VISUAL	ON-SLIDE COPY
01	Title & Framing	Full-bleed dark background, single centered line, no bullets. MDR Devices logo top-left, much. Consulting mark bottom-right. One display-weight line, generous negative space.	“One Compliant Thread. From Receipt to Patient.”
02	Current State	Four bordered boxes (QMS / LIMS / Field Service / ERP) connected by dotted, visibly broken lines; a faint implant icon crossing all four with question marks at each junction.	“Quality. Lab. Field. Finance. Four systems of record. Zero shared view of one implant's journey.”
03	Why the Gap Persists	Org chart, five department nodes each with a speech-bubble showing an isolated functional request; single dotted arrow beneath labeled “the process no one described.”	“Functional requests answer 'what does my screen need.' They don't answer 'what has to be true for this implant to be compliant.'”
04	The Compliant Digital Thread	Continuous horizontal ribbon through five icons (supplier, quarantine lock, manufacturing gear, hospital building, invoice); a small implant icon riding the ribbon left to right.	“One data model. One audit trail. One definition of compliant — inherited, not invented, department by department.”
05	Architecture at a Glance	Five Odoo module icons (Inventory, Manufacturing, Quality, Sales, Accounting) in the foreground; Field Service and CRM as smaller companion icons at the thread's two ends; a distinctly separate “MedTech Extension Layer” band beneath holding five labeled items — UDI Reporting · Recall & Consignment · Multi-Payer & Rebate Settlement · Instrument Reprocessing · QA Dual-Release — visually subordinate but explicitly named. Signature line, spoken only, not printed: “We don't sell zero custom code. We sell named custom code.”	“Five core applications carry the flow — Field Service and CRM complete it at the point of surgery and the physician record. A named extension layer covers what standard Odoo doesn't — the same pattern behind our other regulated-device engagements.”
06	Sales & CRM: Credential Governance	High-fidelity mockup of an Odoo sale order form displaying a red validation banner: “Blocked — HCP certification expired 04/2026.” Screenshot-style UI mockup — replace with a real sandbox screenshot when available.	“A sales order cannot confirm against an invalid or expired physician credential. Compliance is a system constraint, not a checklist.”
07	Logistics: UDI Receipt to Patient	Mockup of a <code>stock.lot</code> record card with DI/PI fields auto-populating beside an animated barcode-scan icon; small badge on the PI sub-field group reading “extension layer.”	“Scan once. Device Identifier and Production Identifier parse automatically — batch, serial, expiry, structured for UDI database reporting.”
08	Quality: The 90-Day Hold	Kanban board — Quarantine → Quality Check → Hold Countdown (progress bar) → Released to Stock; lock icon disengaging only at final release.	“Inbound stock cannot leave quarantine before both the quality check passes and the 90-day clock completes.”
09	Finance: One Event, Multiple Payers	Single “Surgery Consumption” event icon branching into two invoice mockups — Insurer / Patient Co-Pay — both carrying a shared analytic tag badge; small “extension layer” badge on the branch point itself.	“One clinical event. Two payers, one shared analytic thread — the payer-split invoicing itself is named extension-layer logic, not an out-of-the-box claim.”

10	The Full Lifecycle, Live	Horizontal swimlane of the complete value stream (Stages 1–6), inset live Odoo dashboard screenshot showing real-time state, small callout stat box.	“Supplier to patient. One thread, fully traceable. Comparable deployments have cut audit-evidence compilation from weeks to a same-day export — we'll size your number together in discovery.”
11	Validation & Compliance	Funnel — URS → Risk Assessment → Configuration Spec → IQ/OQ/PQ → Validation Summary; two badges: “GAMP 5 Category 4 — Native Core” and “Category 5 — Extension Layer, Validated Separately.”	“GAMP 5, risk-scaled: Category 4 for the native core, Category 5 rigor for the extension layer. Native audit trail. A designed two-step release gate for the Annex 11 / Part 11 e-signature intent.”
12	Roadmap & The Ask	Phased horizontal timeline — Discovery Confirmation → Configuration Sprint 1 (Sales/Quality) → Configuration Sprint 2 (Manufacturing/Finance) → Validation → Go-Live. Beneath it, a bordered callout — “The Ask” — with four labeled lines so a CFO has something concrete to write down. Subtitle beneath: “Delivered well, this is also our MedTech Compliance Accelerator — the pattern we bring to the next engagement, not a one-off build.”	“The Ask: a fixed-fee, three-week Discovery Sprint. Scope: Sales credential gating and Quality quarantine automation, configured and live in a test instance against your data. Fee: fixed at kickoff, not time-and-materials. Decision needed: within 5 business days of this meeting, to hold the Sprint 1 slot — you'll see this thread live in your own sandbox before your next board update.”
