

Verbatim Delivery

30-Minute Executive Pitch — the exact words, slide by slide

SLIDE	SPOKEN LINE
1	"Today isn't about an ERP migration. It's about something MDR Devices has never had — one validated record of how a compliant implant actually moves through this business, start to finish. Everything after this slide is in service of that single idea."
2	"Each of these tools does its job well in isolation. The problem shows up in the white space between them — the handoffs nobody owns. That white space is where your audit exposure lives."
3	"Every department gave an honest answer when asked what they do in the ERP. None of them own the thread connecting those answers — because until now, nobody's job was to own it. That's not a gap in your team. It's a gap in the method. It's exactly the gap we're built to close."
4	"This is the mental model for everything that follows. Every screen, every automation we show you next is one segment of this single thread."
5	"Most of what you're about to see runs on standard Odoo Enterprise configuration — Studio fields, automated rules, the native analytic engine. Five core apps carry the flow, with Field Service closing the loop at the point of surgery and CRM holding the physician credential record. That's what protects your upgrade path. Where standard Odoo genuinely stops short — structured UDI reporting, recall and consignment depth, multi-payer and rebate settlement, instrument cycle tracking, dual-authentication release — we extend it deliberately, and I'll tell you exactly where, because that's the same pattern we've used on other regulated device implementations. I'd rather show you precisely where the extension sits than claim there isn't one. We don't sell zero custom code. We sell named custom code. "
6	"This isn't a checklist item in a training deck. It's a hard stop in the sales flow. Your sales team can't accidentally ship to an unqualified physician — the system won't let the order confirm."
7	"Every implant's identity is captured at the point of receipt. The barcode parsing is native Odoo; structuring it further for UDI database reporting is the extension layer I mentioned a moment ago — small, scoped, and validated on its own track."
8	"No one has to remember the hold period. The system enforces it structurally — the stock is simply not pickable until both conditions are true. And to be precise about what that hold is: it's your own quality policy, which we enforce as hard as any regulation, and whose exact driver we confirm together in discovery."
9	"Your finance team stops manually stitching together which claim belongs to which surgery. The analytic thread that ties every invoice back to the clinical event is native. The payer split itself — insurer here, co-pay there — is one of our five named extensions, because a sale order in standard Odoo invoices exactly one partner, and I'd rather tell you that in this room than have you discover it in UAT. Either way, the link is structural, not a spreadsheet exercise."
10	"What you've just seen slide by slide is one continuous flow. This is what your CEO sees on a Monday morning — not four dashboards stitched together after the fact, but one live operational picture. On comparable engagements, that's translated into audit-evidence work going from weeks to a single day. I won't hand you that number as gospel for MDR Devices specifically — we size it together in discovery — but the direction holds."
11	"We validate this the way regulators actually expect a mixed system to be validated — Category 4 rigor for the native core, Category 5 rigor for the scoped extension layer, fully traceable, and honest about where a control needs to be designed rather than assumed."
12	"We're not asking you to commit to a black box, and we're not leaving this vague. The ask is a fixed-fee, three-week Discovery Sprint — Sales credential gating and Quality quarantine automation, live in a test instance against your own data by the end of it. Fee is fixed at kickoff, not open-ended. We need a decision within five business days of this meeting to hold that Sprint slot, and you'll see this thread running on your own data before your next board

update — not a promise on a slide. One more thing, because it matters to how you should think about that fee: done well, this becomes our MedTech Compliance Accelerator — a pattern we refine and bring to the next regulated-device engagement, not something built from zero for you and thrown away after go-live.”

DELIVERY NOTES

Hold pace deliberately slow through Slides 1–4 — that's where trust gets built before any technical claim is made. Move briskly through 6–9 and let the mockups carry the explanation rather than narrating every field name aloud. Slide 5 is the pivot point of the whole deck — it's where the candidate demonstrates having actually researched much. Consulting's own MedTech methodology rather than reciting generic Odoo capability. Don't rush it. Slide 9's extension admission is a feature, not a concession — deliver it with the same confidence as the native claims. Watch the CIO during Slide 11 and slow down further at any sign of skepticism on the validation approach. If the Annex 11 electronic signature question arrives early — it often does, sometimes as early as Slide 7 — don't treat it as off-script; the answer is ready regardless of when it lands.
