

Rehearsal Cue Card

For drilling out loud — print both sides, or keep it on a second screen. Don't read the full documents mid-drill.

THE 90-SECOND SPINE · SAY THIS COLD, NO SLIDES, BEFORE TOUCHING THE DECK

“MDR Devices has five departments that each know their own piece of compliance and none of them see the whole thread. We're proposing Odoo — five core apps plus Field Service and CRM — built native wherever the platform genuinely covers the requirement, with five named extensions where it doesn't: UDI structuring, recall & consignment depth, multi-payer & rebate settlement, instrument reprocessing, dual-release. We don't sell zero custom code, we sell named custom code. The ask is a fixed-fee, three-week Discovery Sprint, decision within five business days, and you'll see it running on your own data before your next board update.”

Lines to own word-for-word

- “We don't sell zero custom code. We sell named custom code.” (Slide 5, spoken only)
- “I'd rather show you precisely where the extension sits than claim there isn't one.” (Slide 5)
- “A sale order natively invoices a single partner — the payer split is named extension logic, and our documents say so.” (if challenged on Slide 9)
- The Ask, all five elements: fixed-fee / three-week Discovery Sprint / Sales credential gating + Quality quarantine automation / decision within 5 business days / live in your sandbox before your next board update. (Slide 12 — never drop an element)

Objection cue table · trigger word → core beat, not the full answer

IF THEY SAY...	THE ONE THING TO LAND
“...upgrade breaks your custom code”	Extensions are named and small; Studio-first keeps most of it upgrade-safe; review budgeted, not denied
“...how fast is this really”	Credential gate + quarantine live in a test instance inside the first sprint
“...departments won't adopt it”	The block is the rule they already run informally — now enforced consistently; they define the conditions
“...no e-signature”	Named platform boundary, Category 5, two-step gate — and Annex 11 is EU GMP, applied as the GxP benchmark
“...instruments aren't implants”	Separate asset loop, not a variant — dispatch/return/sterilize/cycle-limit
“...what about returns”	Same lot, disposition field, credit note only if already billed
“...GDPR?”	Separate regime, named, routed to legal/DPO — not solved here on purpose
“...tech fakes the sterilization pass”	A structural block can't stop a lie — so it sits behind the same two-person gate as quarantine release
“...who pays for a bad return”	The system gives you the facts; the contract decides who pays
“...mid-cutover complaint on a migrated device”	New system, always, once migrated — legacy never reopens
“...name a reference client”	Won't name without consent; reference calls are a condition of the engagement, not a slide claim
“...which regulation says 90 days” NEW	None — it's YOUR quality policy; we enforce it structurally and confirm the driver in discovery. Never say “regulatory floor.”

much. Consulting | MDR Devices Medizintechnik GmbH — Pitch Package v2

Page 1 of 2

“...how many Odoo projects have YOU done” NEW	None in production, three full ERP lifecycles, every claim here doc-checked and sandbox-verified by me. No bluffing.
“...show me the two-payer field” NEW	Doesn't exist natively — one order, one invoice partner; the split is a named extension, our docs already say so
“...what does it cost to run” NEW	Licenses + Odoo.sh are public arithmetic, fixed in discovery; our fee is fixed per phase; no theatre totals
“...what happens to the LIMS” NEW	Quality process moves to Odoo; lab instrument capture stays in LIMS, integrated — a named decision, confirmed in discovery
“...which Odoo tier / version”	Odoo.sh, current stable Enterprise, controlled upgrade cadence — by name, because it makes the change-control claims true
“...where does temperature data come from” NEW	Logger import or IoT feed — a named integration workstream, not a free by-product of two fields
“...prove the payer-sequencing field is real”	Honest answer: designed in discovery — never invent a field name to sound finished

TIMING CHECK · 30-MIN SLOT, 12 SLIDES

Problem framing (1–4) ~6 min · Architecture + extensions (5–9) ~10 min · Compliance, ROI (10–11) ~6 min · The ask (12) ~3 min · Q&A reserve ~5 min minimum. Slides 5–9 are where technical objections land — leave room. If slides run long, cut from the middle, never from the ask.

BEFORE YOU WALK IN

Say the 90-second spine cold, three times, today · Say the Ask exactly, five elements, without checking this card · Pick one objection at random and answer aloud — repeat until none make you pause · Drill the four newest beats hardest: 90-day regulation source, your own Odoo track record, the two-payer field, running costs — they're the least rehearsed.
