

Product Capability Map

What SalesOps CRM does, mapped to the customer lifecycle it manages end-to-end.

Pack 02 — Company & Product Deep-Dive

Prepared by Waqas Mian · **Prepared for** Chief Executive Officer, RRUP sp. z o.o.
(SalesOps CRM)

Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	Product Capability Map
Purpose	Give a precise, verified view of product capability to underpin positioning and demos.
Status	Build-now · Verified from RRUP public product
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~5 min

BOTTOM LINE UP FRONT

SalesOps CRM is not a generic CRM — it is an **end-to-end operating system for installation trades**, covering lead → quote → contract → job → invoice → commission in one system. Its differentiated core is the **Work-Flow engine** and its cross-vertical breadth. Feature specifics that depend on the live demo are flagged; everything else is verified from the public product.

1. The organising idea: one system, whole lifecycle

The product's central claim is unified lifecycle management for physical-installation businesses. Where a typical installer stitches together a basic CRM, spreadsheets for quoting, WhatsApp for crew coordination, and manual compliance paperwork, SalesOps CRM collapses that into one workspace.

Lifecycle stage	Capability 
Lead capture	Automated sales funnel, no manual hand-offs between stages
Quote / proposal	Branded PDF quotes on the client's own letterhead
Contract	Contract generation + e-signature with contractors
Job / installation	Work-Flow engine: task automation, status routing, crew assignment
Completion	Completion protocols / documents on client letterhead
Invoice / commission	Auto commission calculation on status completion
Oversight	Reporting/analytics: pipeline, user activity, install/job reports

2. The differentiated core — the Work-Flow engine

The Work-Flow engine is the capability most worth leading with. It lets a business define automated task chains tied to contract stages: auto-assign tasks, fire SMS/system notifications at each step, route responsibility to named people or teams, and **automatically calculate sales commission** when a defined status is reached. For a growing installer, manual commission calculation and dropped hand-offs are two of the most acute operational pains — and this addresses both directly.

3. Extensibility

WHY THIS MATTERS FOR THE UK

100+ pre-built add-on modules plus an open API mean UK-specific requirements (MCS/DNO/ECO4 compliance fields, UK VAT, GBP invoicing) are a **configuration and extension exercise on a proven platform**, not a rebuild. This is a materially faster and lower-risk localisation path than a from-scratch product — subject to confirming with RRUP exactly what UK localisation already exists (Pack 22, Q7).

4. What is NOT yet verified

PENDING DEMO VERIFICATION

The live demo instance (demo.salesopscrm.com) was unreachable during this research (an infrastructure outage on RRUP's side, independent of us). Therefore claims about **specific UK feature depth** — offline field sync behaviour, exact CPQ localisation for BTU/COP, MCS template pre-configuration — are marked pending. Do not assert these to a prospect until verified in a working demo. The technical questions to resolve them are in Pack 20.

5. Implication

Positioning (Pack 04, Pack 09) should lead with the two verified, differentiated strengths — **cross-vertical breadth** and the **Work-Flow automation engine** — and treat everything demo-dependent as "to be shown live," which is also the strongest sales posture: proof over claim.

Sources & confidence

Claim	Source	Confidence
Lifecycle capabilities, Work-Flow engine, e-sign, 100+ modules, API	rrup.pl	 Verified
UK-specific feature depth	demo unavailable	 Pending demo verification
