Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	Opportunity Sizing — TAM / SAM / SOM
Purpose	Bound the realistic revenue opportunity and expose the assumptions that drive it.
Status	Build-now · Verified base + ⚠ assumptions
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~6 min

BOTTOM LINE UP FRONT

A bottom-up sizing from the verified installer base suggests a UK **serviceable market on the order of low-tens of £millions** in annual software spend, of which a focused entrant might realistically capture a low-single-digit-percent obtainable share in the first few years. This is a viable niche, not a unicorn market — the numbers below are transparent and every non-verified input is flagged.

1. Method

Bottom-up sizing: installer count × software adoption × average annual contract value. This is more honest than a top-down "% of a big market" claim because every driver is inspectable.

2. The sizing (illustrative — assumptions flagged) ⚠

Layer	Definition	Basis	Value
TAM — Total Addressable	All UK MCS-certified installers that could run this software	5,250+ firms ✓ × est. avg £3,000–6,000/yr contract ⚠	~£16m–£32m/yr ⚠
SAM — Serviceable Available	Solar + heat-pump installers of the target size (Pack 06)	~40–50% of TAM firms ⚠	~£7m–£15m/yr ⚠
SOM — Serviceable Obtainable (Yr 1–3)	Realistic capture as a new, focused entrant	low-single-digit % of SAM ⚠	~£150k–£600k/yr by Yr 3 ⚠

READ THIS HONESTLY

The **installer count is verified**; the **contract-value and capture assumptions are estimates** pending UK pricing (Pack 22) and real pilot conversion data (Pack 08). The ranges are deliberately wide. Treat this as a **framework that sharpens the moment UK pricing and early conversion are known**, not a forecast. The SOM range is reconciled against the bottom-up revenue model in Pack 16.

3. What the sizing tells us

- The prize is **real but bounded** — a focused niche worth low-tens of £millions at the serviceable layer.
- It rewards **efficient, low-CAC entry** (Pack 08) far more than heavy spend — the obtainable share is small in year one by nature.
- It argues for a **lean cost base** (Pack 13) so the venture is viable at modest revenue, and against over-hiring ahead of proven traction.

4. Implication

The sizing supports proceeding — with discipline. It does not support a high-burn, land-grab posture. Every downstream plan (staffing, funding, launch pace) should be sized to a niche worth single-digit £millions obtainable, not a mass market.

Sources & confidence

Input	Source	Confidence
5,250+ installer base	MCS	✓ Verified
Average annual contract value	estimate	⚠ Assumption — validate
SAM %, SOM capture %	estimate	⚠ Assumption — validate
