

UK Renewables Installer Market Report

Market size, growth and structure for the UK renewables-
installer software opportunity.

Pack 03 — Market Research

Prepared by Waqas Mian · **Prepared for** Chief Executive Officer, RRUP sp. z o.o.
(SalesOps CRM)

Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	UK Renewables Installer Market Report
Purpose	Establish whether the UK opportunity is real and large enough to justify entry.
Status	Build-now · Verified/Public data
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~6 min

BOTTOM LINE UP FRONT

The UK renewables-installer market is **small in absolute software spend but growing fast and structurally protected by government policy**. The installer base is large enough (5,250+ certified firms) and expanding quickly enough (+50% forecast for 2026) to support a focused, differentiated entrant — provided the entry is narrow and channel-led (Pack 06, Pack 08), not broad.

1. The market in numbers

5,250+

MCS-CERTIFIED INSTALLERS

267k

SOLAR INSTALLS (2025)

~£262m

UK FSM SOFTWARE MARKET
(2026)

UK renewable installations — 2025 record, +50% forecast for 2026

2025 = verified MCS actuals · 2026 = market +50% growth forecast applied (illustrative)

Exhibit 1: UK renewable installations — 2025 verified actuals and 2026 growth forecast.

Metric	Value	Confidence
MCS-certified installers (all tech)	5,250+ (highest since 2008)	✓
MCS solar PV installers	4,000+	✓
Solar PV installs, 2025	267,032 (+31%, a record)	✓
Heat pump installs, 2025	60,000+ (single-year record)	✓
Cumulative heat pump installs	250,000+ (Feb 2026)	✓
2026 growth forecast	+50% YoY	
UK field-service-management software market	~USD 234m (2025) → ~USD 262m (2026); CAGR ~9–16%	

2. Why the market exists — and why now

The demand is not speculative; it is policy-manufactured. Three structural forces make installer businesses scale, and scaling is precisely when they outgrow spreadsheets and buy software:

- **Boiler Upgrade Scheme** — up to £7,500 off a heat pump, pulling demand forward. ✓
- **0% VAT on solar** — through March 2027, improving installer economics. ✓
- **Government target** — 600,000 heat pumps per year by **2028** (a 10× ramp from current run-rate). ✓

THE DEMAND-TO-CRM LINK

More installs → more jobs, more compliance paperwork (MCS/DNO/ECO4), more subcontractor coordination, more commission to calculate. Every one of those is a CRM/workflow pain. The market isn't just growing — it's growing in a way that **directly manufactures demand for exactly what SalesOps CRM does**.

3. The honest counterweight

The absolute software market is modest (~£200m order of magnitude, USD) and already contested (Pack 04). This is a **focused niche play, not a land-grab**. Success depends on winning a defensible share of a specific segment (Pack 06), not on the market's size alone. Entry economics must reflect that discipline (Pack 16).

4. Implication

The market clears the "is it real and growing" test decisively. The binding questions move downstream: *which segment first* (Pack 06), *how to reach them cheaply* (Pack 08), and *how to differentiate against Payaca/Reonic* (Pack 04).

Sources & confidence
