

Competitive Landscape Overview — Porter's Five Forces

The structure of the UK renewables-CRM market, and where a new entrant actually stands.

Pack 04 — Competitor Analysis

Prepared by Waqas Mian · **Prepared for** Chief Executive Officer, RRUP sp. z o.o.
(SalesOps CRM)

Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	Competitive Landscape Overview — Porter's Five Forces
Purpose	Assess industry attractiveness and the real competitive pressures on entry.
Status	Build-now · Verified competitors
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~6 min

BOTTOM LINE UP FRONT

A Five Forces read shows a market that is **contested but not closed**: a UK-native leader (Payaca) and a well-funded EU entrant (Reonic) already occupy the renewables niche, but switching costs are moderate and differentiation is possible on price model and cross-vertical breadth. This is a viable third-entrant market — provided the wedge is real and demo-proven, not asserted.

Porter's Five Forces

Exhibit 1: Competitive positioning — renewables vertical depth vs UK-native presence.

Force	Assessment	Intensity
Competitive rivalry	Payaca (UK-native leader) + Reonic (German, €13M-funded, entering UK) directly contest the renewables niche; several general trade-CRMs at the edges	High
Threat of new entrants	Reonic proves the EU-to-UK entry path is live; low regulatory barrier to software entry, but brand/reference barriers are real	Medium–High
Buyer power	Installers are cost-conscious; free trials and low switching-in cost raise buyer leverage; but incumbents' onboarding fees create lock-in once adopted	Medium
Supplier power	The "supplier" is RRUP (the platform). Terms with RRUP directly shape viability — the deal-structure question (Pack 14) is effectively supplier power	Medium (deal-dependent)
Substitutes	Spreadsheets + WhatsApp + generic CRM (the status quo most small installers still run) is the biggest real competitor	High

The most important force: the status quo

THE REAL COMPETITOR IS "NOTHING"

For the target small-installer segment, the incumbent isn't Payaca — it's **spreadsheets and WhatsApp**. That's good news (a large un-penetrated base) and a challenge (you must sell the category, not just beat a rival). The pitch (Pack 09) therefore leads with the cost of the status quo — the "leaky bucket" — before competitor comparison.

Where the entry wedge sits

1. **Price model** — per-seat vs Payaca's £999+/mo flat (Pack 02) — real for small installers.
2. **Cross-vertical breadth** — solar + heat pump + more in one system (Pack 02).
3. **Proven platform** — 600+ deployments neutralises the "unproven newcomer" objection.

Each must be **demo-verified** before it's claimed head-to-head (Pack 20).

Implication

The market is attractive enough to enter and structured such that a differentiated third player can win share — but only against the status quo primarily, and the incumbents secondarily, with a wedge that survives contact with a live demo.
