

Company & Product Deep-Dive

RRUP sp. z o.o. / SalesOps CRM — verified facts, product, pricing, clients

1. The company

RRUP sp. z o.o. — a Polish limited-liability company (the Polish equivalent of a UK Ltd).

- **KRS (company register number):** 0000978166
- **NIP (tax ID):** 5423451043
- **Offices:** Białystok (HQ — ul. Świętego Andrzeja Boboli 24, 15-649 Białystok) and Sejny (ul. Zawadzkiego 1, 16-500 Sejny), north-eastern Poland
- **Sales line:** +48 574 422 173 · **Support line:** +48 731 426 000
- **Self-described positioning:** "a fast-growing IT company... producer of RRUP CRM software for managing projects, customer relationships, and organising the whole company in one place."

This is an established, scaled Polish software vendor, not a two-person outfit.

2. Real scale — their own published numbers

Metric	Value
Users on the platform	15,000+
Documents generated by the system	2.5 million+
System deployments/implementations	600+
Free trial offered	30 days, no obligation

600+ deployments and 15,000+ users is a proven product, not an early-stage MVP.

3. What the product actually does

RRUP CRM is a vertical-specific, trade/field-service CRM built around one idea: **one system covering the entire customer lifecycle** — lead capture → quoting/proposals → contract generation & e-signature → installation/job scheduling → completion → invoicing/commission → reporting — for physical-installation trades.

Named capabilities, confirmed on their site: - **Automated sales funnel** — lead to close, no manual hand-offs required - **Work-Flow engine** — auto-assigns tasks, sends SMS/system notifications at each contract stage, routes responsibility to named people/teams, **auto-calculates sales commission** on status completion - **Document generation** — branded PDF quotes/contracts/completion protocols on the client's own letterhead, e-signature with contractors - **100+ pre-built add-on modules**, open API for

integrations, bespoke development for unique requirements - **Reporting/analytics** — sales pipeline, user activity, install/job reports, meeting summaries - **Vertical-specific modules**: Solar PV, Heat Pumps (native integration with ciepło.app, a heat-pump sizing/design tool), Air Conditioning/Refrigeration, Service sales, Construction, Field Service/Maintenance, HRV/MVHR, IT/project management

4. Real client evidence

Named, on-record testimonials: - **Maciej Bodo, Technical Director** — large-organisation phased rollout, "significantly customised to our requirements," improved communication, optimised costs, automated most processes, higher staff productivity and profit. - **Yuliia Popova, Board Member** — confirms working directly with "RRUP sp. z o.o." from the outset, full process automation, professional client-facing offers, single-workspace company control. - A third (unnamed in the extract) — solar PV + heat pump modules, described implementation as "pure pleasure."

 **Not on this list: Grupa Polsat Plus.** Earlier planning material named Polsat as RRUP's flagship enterprise client. It appears nowhere on RRUP's own site alongside these testimonials, and no independent source connects the two companies. Treat this as unconfirmed until the CEO addresses Question 6 in Folder 13 — do not use it in any pitch or outreach material before then.

5. Pricing model (their live Polish price list, net of VAT)

Per-seat SaaS, volume-tiered:

Users	PLN/user/month	Approx. GBP/user/month*
1–10	100 zł	~£20
11–20	90 zł	~£18
21–30	80 zł	~£16
31–69	70 zł	~£14
70–199	60 zł	~£12
200–499	50 zł	~£10
500+	40 zł	~£8

*Converted at the mid-July 2026 rate (1 PLN ≈ £0.198). This is the **Polish** price list — UK pricing is a decision you and RRUP need to make; do not assume it transfers directly. UK trade software (Payaca, Commusoft) tends to price higher per seat, which is a competitive opening, not a constraint.

6. The UK brand already exists — and that's important

"SalesOps CRM" is RRUP's own existing brand name for the UK market — confirmed via multiple independent search results describing it as "a RRUP product," using the same vertical structure. Public

search snippets already describe SalesOps CRM in superlative UK-market terms ("the most extensive CRM for the HRV systems industry available on the UK market").

The gap this reveals: the brand and marketing site exist and stake bold UK-market claims, but per what's been described to me there is no actual UK operational presence — no UK team, no UK customer base, no UK support. This is worth naming to RRUP directly (Question 4, Folder 13): the website is ahead of the business, and closing that gap is a real part of the job here.

I could not load `salesopscrm.com` directly (Cloudflare bot-protection blocks non-browser automated requests). Everything above about SalesOps CRM specifically is from search-engine snippets and inference from RRUP's identical Polish site — getting real access to the live site and the CRM demo remains a high-value unblock.
