

Lead Generation & Data Sources

Where the leads physically come from

Where the leads actually are — concrete, checkable sources

Source	What it gives you	Status
MCS Installation Database (certificate.microgenerationcertification.org)	The public, government-linked directory of every MCS-certified installer in the UK — the single best-qualified, lowest-cost list to build a cold outreach campaign from, because every entry is by definition your ICP (certified, active, installing now).	 Public, confirmed live
Companies House SIC-code search	Free filtering of all UK-registered companies by industry code (construction, renewable energy installation, HVAC) — cross-reference against MCS data to find companies not yet MCS-listed (newer entrants, worth an early relationship).	 Free, public (resources.companieshouse.gov.uk/sic/)
MCS register + LinkedIn cross-reference	Systematically cross-referencing the MCS installer database against LinkedIn to identify named Managing Directors/Operations Directors at each firm — turns an anonymous company list into an actual outreach target list with real names.	 Sound method, manual/semi-automated effort required — check MCS's terms of use before any automated scraping
Paid B2B data providers (B2B Data Scout, Prospect360, More Than Words)	SIC-code and company-size filtered contact lists with decision-maker names/emails, ~95%+ accuracy claimed. Useful to accelerate outreach once the ICP is precise; not a substitute for the free MCS/Companies House sources for this specific niche.	 Commercial, cost not yet confirmed — get quotes before committing

Source	What it gives you	Status
RECC and HIES (the mandatory consumer-protection codes every MCS installer must join)	Trade-body partnership/sponsorship opportunities — a joint webinar, newsletter mention, or partner-directory listing reaches your entire ICP at once and carries third-party credibility.	✅ Real, verified bodies — worth a direct partnership conversation
Futurebuild (12–14 May 2026, ExCeL London)	26,590 visitors, 450 exhibitors, sustainable-construction focus — broader than solar/heat pump but strong for the construction-vertical CRM angle.	✅ Confirmed dates/scale
Solar & Storage Live UK (22–24 Sept 2026, NEC Birmingham)	20,000+ solar/storage professionals, 500+ exhibitors, and specifically a "Meet the Installers" zone — as close to "your exact ICP walking past a stand" as UK trade shows get.	✅ Confirmed dates/scale
InstallerSHOW (23–26 June 2026, NEC Birmingham)	The UK's largest installer event across heat/water/air/energy trades — 1,000+ exhibitors, 40,000+ visitors . Broader reach than Solar & Storage Live, less renewables-specific.	✅ Confirmed dates/scale
RRUP's own EU customer base	Any existing customers with UK operations, or EU installers expanding into the UK themselves, are a warm-referral channel RRUP can open doors to directly.	? Ask RRUP directly (Folder 13)

Sequencing recommendation

Month one: cold outreach directly against the MCS database (free, immediately available, exactly your ICP) — don't wait for trade shows or paid data to start generating pipeline.

Ongoing: trade-show presence (InstallerSHOW in June, Solar & Storage Live in September, Futurebuild the following May) builds relationship equity and brand visibility at scale, complementing rather than replacing the direct outreach motion.

Once you have 2–3 UK customers: RECC/HIES channel partnership conversations become far more credible — trade bodies are more receptive to promoting a vendor with actual UK references than a pre-launch newcomer.
