

Financial Model Framework

Unit economics template — needs real inputs to complete

1. Why this folder is a framework, not a model yet

A real unit-economics model needs inputs this package doesn't have yet: confirmed UK pricing, confirmed deal structure (equity share of revenue vs. commission %), and real customer acquisition cost data (which only exists once outreach starts). What follows is the **shape** of the model to build, with placeholders clearly marked — filling it in properly is a near-term next step, not something to fabricate now.

2. Revenue model inputs needed

Input	Source	Status
UK per-seat pricing	To be set with RRUP — Polish pricing (Folder 01) converts to roughly £8–£20/user/month depending on volume tier, but UK-specific pricing hasn't been confirmed	? Ask RRUP
Your revenue share (equity dividend, or commission %)	Depends entirely on Folder 13, Question 1 and Question 9	? Ask RRUP
Average seats per customer	Unknown until first UK customers are onboarded — RRUP's Polish base likely has a distribution across their pricing tiers worth asking about as a proxy	? Ask RRUP
Expected churn rate	Unknown — ask RRUP for their Polish churn/retention numbers as a starting proxy, understanding UK will differ	? Ask RRUP

3. Cost model inputs needed

Input	Source	Status
Customer acquisition cost (CAC)	Unknown until outreach starts — track from month one once the SDR/outbound motion (Folder 05, 09) begins	 Build from real data, don't estimate in advance
Team costs (if hiring the launch pod)	UK SaaS SDR/AE/Implementation Consultant market rates — benchmark before hiring, not estimated here	 Needs benchmarking
Trade show costs	Get exhibitor quotes directly from InstallerSHOW/Solar & Storage Live/Futurebuild organisers	 Needs direct quotes
Legal/formation costs	UK solicitor quote for the actual agreement (Folder 07)	 Needs direct quotes

4. What a completed model would answer

Once the inputs above are real: how many UK customers are needed to cover the launch pod's costs (breakeven customer count), how long the runway from a Start Up Loan or personal capital actually lasts at a realistic sales velocity, and what CAC threshold makes each acquisition channel (cold outreach vs. trade shows vs. paid data) worth the spend.

5. Recommended next step

Once Folder 13 is answered and UK pricing is set, this is the single highest-value document to properly build out — everything else in this package supports the go-to-market, but this is what tells you whether the go-to-market plan actually pays for itself on a realistic timeline.
