

Regional Analysis — North West & Launch Geography

Why a Manchester / North West beachhead is a defensible launch geography.

Pack 03 — Market Research

Version / Date	v2.0 · July 2026 · Reading time ~4 min

BOTTOM LINE UP FRONT

A **Manchester / North West** launch is defensible on one verifiable anchor — Greater Manchester's 2038 carbon-neutral target, 12 years ahead of the national 2050 date — plus genuine regional trade density. It is a reasonable beachhead, but the choice should be treated as a starting hypothesis to validate against where the installer density and warm network actually are.

1. The verifiable anchor

Greater Manchester has a formally adopted target of **carbon neutrality by 2038** — a full 12 years ahead of the UK's 2050 target — confirmed directly by the Greater Manchester Combined Authority's Five-Year Environment Plan. Aggressive local decarbonisation correlates with concentrated demand for renewables installers, and therefore for the software they run.

2. Why a regional beachhead at all

FOCUS BEATS SPREAD

A zero-base launch cannot cover the whole UK credibly. Concentrating early sales, references and trade-show presence in one high-density corridor (North West, extendable to the Midlands and Yorkshire) builds referenceable density faster than a thin national spread — the first UK case studies come from a cluster where word travels, not from scattered one-off wins.

3. Rollout logic

Phase	Geography	Rationale
Beachhead	Greater Manchester / North West	Policy anchor + trade density; build first references
Expansion 1	Midlands, Yorkshire	Adjacent high-density corridors; trade-show catchment (NEC Birmingham)
Expansion 2	National	Once references and playbook are proven

The specific ordering beyond the beachhead is a hypothesis (⚠) to refine against real MCS-installer density data (Pack 05, Pack 06) rather than asserted as fixed.

4. Implication

Manchester is a sound, evidence-anchored place to start — and the two largest UK installer trade shows (Solar & Storage Live, InstallerSHOW) are both at the NEC in Birmingham, a short reach from a North West base (Pack 08). The launch geography and the lead-generation calendar reinforce each other.

Sources & confidence

Claim	Source	Confidence
Greater Manchester 2038 carbon-neutral target	GMCA Five-Year Environment Plan	✓ Verified
Trade shows at NEC Birmingham	organiser listings	✓ Verified
Regional rollout order	analysis	⚠ Hypothesis to validate
