Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	Regulatory Tailwinds — PESTEL Analysis
Purpose	Show the external forces are durable and favourable, and name the ones that could reverse.
Status	Build-now · Verified/Public
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~5 min

BOTTOM LINE UP FRONT

A PESTEL scan shows the opportunity is powered mainly by **political/legal** and **environmental** forces that are durable but not permanent. The dominant risk is **policy reversal** (grant withdrawal, VAT change) — which is why the model must not assume the tailwind is guaranteed indefinitely (Pack 16 scenarios).

PESTEL scan

Force	Reading	Direction
Political	Net-zero commitments; 600,000 heat pumps/yr by 2028 target; sustained cross-party direction of travel	✅ Strong tailwind
Economic	Boiler Upgrade Scheme (£7,500); 0% VAT on solar to Mar 2027; cost-of-living pressure both drives energy-saving demand and constrains upfront spend	⚠️ Mixed
Social	Rising consumer adoption of solar + heat pump "combos"; installer businesses professionalising	✅ Tailwind
Technological	MCS digitalisation; growing expectation of software-run installers	✅ Tailwind
Environmental	Statutory decarbonisation of heat and power — the structural driver of the entire installer boom	✅ Strong, durable
Legal	MCS certification mandate; RECC/HIES consumer codes; UK GDPR obligations on any operator	✅ Tailwind + compliance duty

The one to watch ⚠️

POLICY-REVERSAL RISK

The most favourable forces are also the most reversible: grant schemes get cut, the 0% solar VAT has a March 2027 sunset, and targets can slip. A responsible plan treats the tailwind as **strong-but-conditional**. The financial model (Pack 16) therefore includes a bear case in which incentive support weakens, and the risk register (Pack 19) carries policy reversal as a named risk.

Implication

The external environment is genuinely favourable and, in its environmental/legal core, durable. But the venture should be built to survive a weaker-incentive world, not one that assumes the current subsidy

regime forever. That discipline is what separates a credible plan from an optimistic one.

Sources & confidence

Claim	Source	Confidence
2028 heat pump target; BUS; 0% VAT to Mar 2027	gov.uk	 Verified
MCS mandate; RECC/HIES codes	MCS / consumer codes	 Verified
Adoption/"combo" trend	UK market coverage	 Public
