

SEO Strategy

Capturing the installers who are already searching for a solution.

Pack 07 — Marketing Strategy

Prepared by Waqas Mian · **Prepared for** Chief Executive Officer, RRUP sp. z o.o.
(SalesOps CRM)

Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	SEO Strategy
Purpose	Target high-intent search terms cost-effectively without over-investing.
Status	Build-now · Reasoned
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~3 min

BOTTOM LINE UP FRONT

SEO is a **slow-burn, intent-capture** channel — worth a modest, focused investment on high-intent terms ("solar installer CRM UK", "heat pump job management software", "MCS compliant CRM"), not a large content-marketing programme. It compounds quietly while outbound does the immediate work.

Target intent clusters

Cluster	Example terms
Vertical CRM	"solar installer CRM UK", "heat pump CRM", "renewables installer software"
Job/field management	"installer job management software UK", "field service software solar"
Compliance	"MCS compliant quoting software", "ECO4 / DNO paperwork software"
Comparison	"Payaca alternative", "Commusoft alternative for installers"

The approach

INTENT OVER VOLUME

Comparison and compliance terms are low-volume but **high-intent** — the searcher is already shopping. A handful of strong pages targeting these (plus the case studies from Content Strategy) will outperform broad, generic SEO for a niche B2B product. "Payaca alternative" is a particularly valuable term given the price-wedge positioning (Pack 04).

Boundary

SEO is a supporting channel, not the growth engine. Keep the investment proportionate; do not divert scarce early resource from outbound and onboarding, which drive near-term revenue.

Implication

A small, intent-focused SEO footprint quietly lowers CAC over time and captures the self-directed buyers — a sensible, low-cost complement to the outbound motion.
