

Scenario & Sensitivity Analysis

Does the business work across a plausible range — and what breaks it?

Pack 16 — Financial Forecast

Prepared by Waqas Mian · **Prepared for** Chief Executive Officer, RRUP sp. z o.o.
(SalesOps CRM)

Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	Scenario & Sensitivity Analysis
Purpose	Stress-test the model so its viability doesn't rest on a single optimistic point.
Status	CEO-GATED · ⚠ Illustrative — driven by Assumptions Register
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~6 min

? PENDING CEO ANSWERS

All figures derive from the Assumptions Register and are illustrative until UK pricing and deal structure are set. This analysis shows the **shape of viability**, not a forecast.

BOTTOM LINE UP FRONT

Across a bear/base/bull range, the venture's outcome swings widely — as expected for an early-stage niche play — but the **base and bull cases clear breakeven within a sensible horizon**, while the bear case underlines why a lean, low-burn start (and a Start Up Loan rather than heavy equity) is the right funding posture. The two drivers that move the outcome most are **trial → paid conversion** and **UK price per seat**.

Scenario fan ⚠

Exhibit 1: Illustrative UK revenue under bear / base / bull assumptions (driven by the Assumptions Register).

Scenario	Customers by end Yr1	Illustrative Yr1 revenue	Reads as
Bear	~12	~£22k	Slow adoption, price pressure — survivable on lean base
Base	~30	~£48k	Steady 3/month; clears costs as pod stays lean
Bull	~55	~£80k	Strong conversion + higher price — funds expansion

Sensitivity — what moves the needle

THE TWO DOMINANT LEVERS

(1) **Trial → paid conversion** — a few points here swings revenue more than any amount of extra outreach, which is why onboarding quality (Pack 12) is the top operational investment. (2) **UK price per seat** — sets both the wedge and the margin; the single most important CEO/RRUP decision for the model. Everything else (churn, seat count) matters less within plausible ranges.

Breakeven & runway

- Breakeven customer count depends on the (gated) revenue share and cost base — illustratively low-tens of customers in the base case, achievable within Year 1–2 at 3/month.
- A Start Up Loan (£25–100k, Pack 17) provides a runway consistent with reaching base-case breakeven if conversion holds — which is why the loan, not heavy equity, fits.

Reconciliation note

This scenario set is reconciled against the GTM viability simulation (Pack _SIMULATION) — the funnel (Pack 08) and staffing capacity (Pack 13) must be internally consistent with these revenue figures. Any contradiction is resolved there, not averaged.

Implication

The business is viable across a realistic range provided the base-case conversion is achievable and pricing preserves the wedge. It is not viable as a high-burn play — the analysis argues firmly for lean, gated spending.
