

Technical Due Diligence — Data Residency & GDPR

Confirming the data architecture supports UK GDPR compliance.

Pack 20 — Technical Due Diligence

Prepared by Waqas Mian · **Prepared for** Chief Executive Officer, RRUP sp. z o.o.
(SalesOps CRM)

Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	Technical Due Diligence — Data Residency & GDPR
Purpose	Verify where data lives and how transfers are handled, to close the compliance loop.
Status	Build-now · Question set
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~3 min

BOTTOM LINE UP FRONT

The compliance plan (Pack 15) needs one technical fact confirmed: **where UK customer data physically resides and how UK → EU transfer is handled**. Get this from RRUP's team so the DPA and cross-border mechanism (Pack 15) are built on reality, not assumption.

Data residency & GDPR questions

1. Will the UK operation run on a fully isolated, local (UK/EU) multi-tenant environment, or share instances with existing continental European data centres?
2. Where does UK customer personal data physically reside, and what transfer mechanism covers any UK → EU flow?
3. What security measures (encryption, access controls, tokenisation) protect personal data at rest and in transit?
4. Can RRUP support the DPA terms and data-subject-rights processes UK GDPR requires (Pack 15)?

THIS CLOSES THE COMPLIANCE LOOP

The compliance pack (Pack 15) specifies the obligations; this confirms the technical reality that makes them satisfiable. The two must match — a DPA that assumes UK residency when data sits in the EU is worthless. Confirm before signing the DPA.

Implication

These answers let the solicitor (Pack 14) draft a DPA and transfer mechanism that actually fit the architecture — turning the compliance plan from paper into practice.
