

Conversion Plan — Funnel Math

The funnel from outreach to paid customer, with every conversion assumption exposed.

Pack 08 — Lead Generation Blueprint

Prepared by Waqas Mian · **Prepared for** Chief Executive Officer, RRUP sp. z o.o.
(SalesOps CRM)

Date July 2026 · **CONFIDENTIAL — PARTNER REVIEW**

Document	Conversion Plan — Funnel Math
Purpose	Make the pipeline maths explicit so targets and staffing are grounded, not guessed.
Status	Build-now · ⚠ Illustrative assumptions (validate with pilot)
Prepared by	Waqas Mian · for CEO, RRUP sp. z o.o. / SalesOps CRM
Version / Date	v2.0 · July 2026 · Reading time ~5 min

BOTTOM LINE UP FRONT

The funnel below is an **illustrative model, not a forecast** — every conversion rate is a flagged assumption to replace with real pilot data. Its purpose is to make the arithmetic honest: how many outreaches must go in the top to yield paying customers, and therefore what one SDR can realistically produce.

The illustrative funnel ⚠

Illustrative acquisition funnel (assumption-based — validate with pilot)

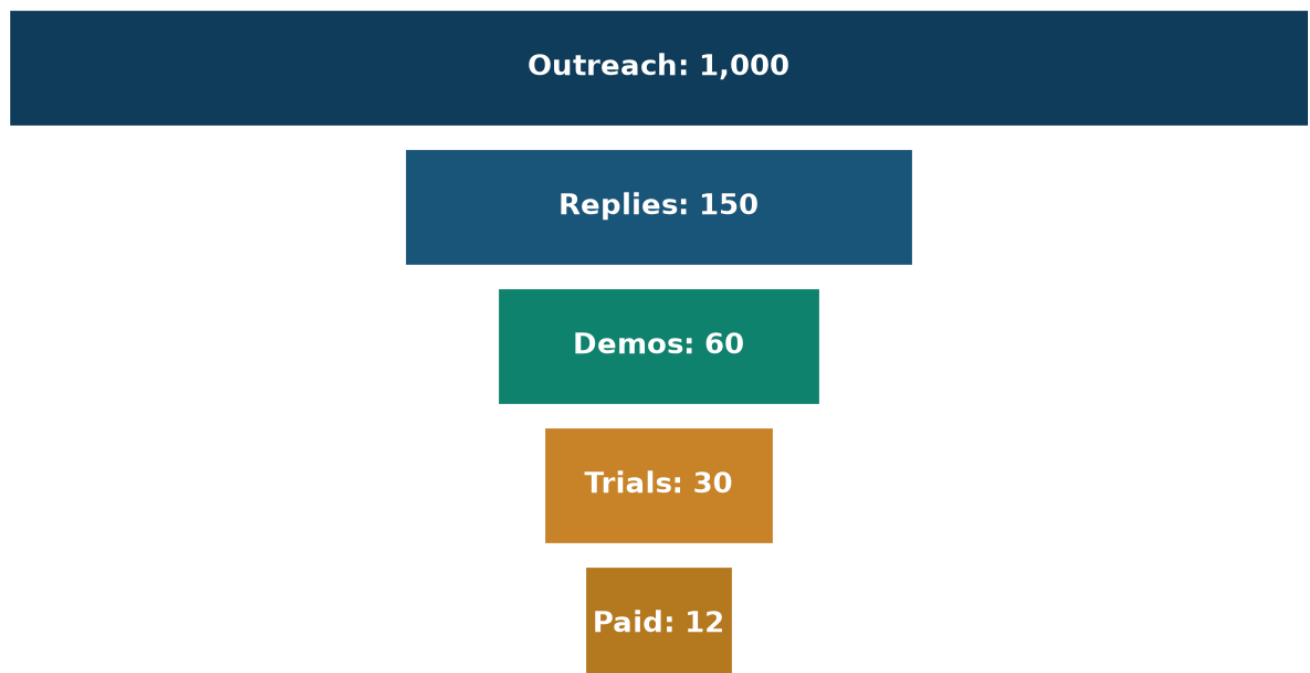

Exhibit 1: Illustrative acquisition funnel — assumption-based, to be validated by the pilot.

Stage	Illustrative rate	From 1,000 outreaches
Outreaches	—	1,000
Replies / conversations	15% ⚠	150
Demos booked & held	40% of replies ⚠	60
Free trials started	50% of demos ⚠	30
Trial → paid	40% of trials ⚠	12

THESE NUMBERS ARE PLACEHOLDERS

The rates above are round, conservative illustrations to show the **shape** of the funnel. The first ~90 days of real outreach replace every one of them. The trial → paid rate in particular depends heavily on the 30-day onboarding (Pack 12), which is why that process is treated as a core retention asset, not an afterthought.

What the maths implies

- To land ~12 customers, the model implies ~1,000 quality outreaches — a quarter's work for one focused SDR at ~40–60/day (Pack 13).
- Small improvements in the **demo → trial** and **trial → paid** steps move revenue far more than raw outreach volume — so onboarding quality and demo skill are the highest-leverage investments.

Reconciliation

These conversion assumptions feed directly into the financial model (Pack 16) and the GTM viability simulation (Pack 5A / _SIMULATION). Any inconsistency between this funnel and the revenue model is reconciled there, not averaged over.
